

conditional on the ledger below — the A8 (ZK) gap is the crux: as run, the feasible proof is not anonymous

Thm.: security preservation

unforgeability + anonymity
+ unlinkability (conditional)

(A1) PLUM EUF-CMA [cited]

(A2) BDEC secure if Π sound+ZK [cited]

(A3) host mul-precompile sound [SP1 est./R0 cited]

(A5) lookup argument sound [cited]

(A4) Griffin AIR $\equiv$ reference
[empirical: 256 vectors]

(A6) Griffin QROM-replaceable
[open, upstream]

(A7) prime instantiates PLUM [open/disclosed]

(A8) produced proof is ZK
[open on 24 GB HW]

Adversary (PPT): (i) request issuance on chosen attributes; (ii) observe honest showings; (iii) malicious verifier (adaptive ϕ); (iv) malicious prover (forge an accepting showing).
Out of scope: side-channel/timing, DoS, key physical security.
